Grenzebach – The Expert Partner for Glass Makers

Whether it's flat, solar or display glass – Grenzebach is recognized worldwide for quality and innovation in glass processing. With over 40 years of experience in the glass industry, Grenzebach is setting new standards for functionality and efficiency in glass processing. Focusing on new developments, such as our direct drive stacker, Grenzebach will help to meet increasing demands for stacking of small and medium size products. With this product line, our designers have also ensured that this stacker will not only handle glass products, but can also be deployed into other markets such as the cement fiber board and Rockwool industries.

As a family-owned company, our success can be attributed to not only our extensive experience in the industry, but also to our commitment to the customer, an innovative spirit and a healthy risk-taking culture.

In 1988, Grenzebach ventured from Bavaria to the American market, and this year will celebrate its 25th anniversary for our Newnan, Ga subsidiary. Economic recovery continues with promising forecasts for the American glass market and allows Grenzebach to look to the coming years with confidence.

Display Glass - Another Grenzebach Success Story

In 2007, our designers in Hamlar outlined options for entering the thin glass market. Now in 2013, more than 30 processing lines have been started up worldwide with more growth to come. Producing thin and highly sensitive glass sheets down to 0.3mm requires a high level of expertise and has spawned new developments and technologies that complement our already existing array of products from inspection through cutting and on to packing. These

innovations and new developments which were developed for the thin glass market have provided Grenzebach with an excellent position in this market.

New 40 Ton Indexing Platform

Another new development which Grenzebach has for the market is a new indexing platform for handling of racks for jumbo product sizes. A unique combination of a friction drive system and laser positioning allow accurate positioning and alignment of loads up to 40 tons at distances up to 10 meters with no special foundation requirements needed. A robust and compact design make the platform fit perfectly in almost any stacking cell and is ideal for stacking cells which need upgraded stacking capacity. With additional features such as optional right angle movement and remote control, the new indexing platform is a versatile solution for any heavy load application.
