

POST SHOW REPORT 2017

The **Zak Glass Technology Expo 2017** was an astounding success. Exhibitors from around the world displayed their latest products and inventions at the 15th edition of the expo. The increased number of visitors iterated the fact that the Indian Glass Processing industry is growing to high heights with demand for the latest technologies. The latest edition of the expo saw unparalleled growth in visitor attendance as well as high levels of exhibitor satisfaction. Around 300 exhibitors showcased their products from across 27 countries at the 2017 Zak Glass Technology Expo.

It was indeed a great show this year. Perfectly managed with stringent rules right from beginning. But due to unexpected heavy rain, the planning could not get final touches. Actually it was non working day on 6th December 2017 but had to get converted to a working day and then the last minute planning (which is the strength of ZAK) made the show successful. As usual, it had great participation and response from the visitors. We could understand the wish list of various customers which is what leads to improvement in the market. We wish all the very best to ZAK.

Sameer Mohite

Sales Manager – Glass Processing Machinery, Benteler Maschinebau

KGS DIAMOND, displayed its revolutionary Swiss Diamond Technology® products. We showcased our latest developments offering a complete range of solutions for glass processors from hand held machines, automatic seaming lines to manual work. We launched our new KGS Swiflex® 2C2 Hand Pads & Belts for Grinding & Polishing application. KGS will open a new office in Bangalore, India in February 2018. The overall response was good for all our products. We met a lot of glass processors who were interested in investing and upgrading their existing technology. We are fully satisfied with the administration and service provided by Mr Sulaiman Khan's team and look forward to the next edition of ZAK Glass Technology Expo, 2018 in Mumbai.

Tanvi Chitnis

Marketing Assistant, Swiss Diamond Technology®

Phoenicia Flat Glass Industries has participated at ZAK Glass Technology Expo 2017 for the 2nd time. This event was truly successful, a wonderful platform for us to interact and network with potential business partners and clients in India. Our booth hosted many visitors throughout the exhibition, and it provided a great opportunity to present our products. We thank ZAK Glass Technology and look forward to our future collaborations with them.

Shimrit Alon

Marketing Communications Manager, Phoenicia

Hegla and Bystronic Glass together shared a stall covering 42 sqm at the recently concluded ZAK Glass Exhibition in BKC, Mumbai. The focus was to showcase the latest product offerings from both these companies and highlight the technology behind the products developed entirely in Germany and meeting world class requirements. ZAK Exhibitions have been a constant source of encouragement and guidance to new entrepreneurs as well as existing Glass Processors in India. The arrangements for Machine display over the last few years has been a major reason for the success of ZAK Exhibitions and we look forward to more innovative ideas such as Technology Area in addition to conference/meeting area in ZAK Exhibition 2018. Hegla and Bystronic Glass wish to thank all the visitors to the booth in ZAK 2017 and look forward to meeting them next year. Beginning of 2018 will also mark the start of preparations for Glasstec in Dusseldorf where both the companies will showcase their latest products.
