

Metal catalysts

Catalyst for high charges

Preferably used for the exhaust gas treatment of engines. Also used in applications where strong pulsations, vibrations, pressure shocks and other mechanical loads are expected. More than 35 years of experience in the field of catalyst development and manufacturing and application stand for best service for our customers.

Your application

- Exhaust gas treatment of engines
- Applications with strong mechanical loads

Your advantages

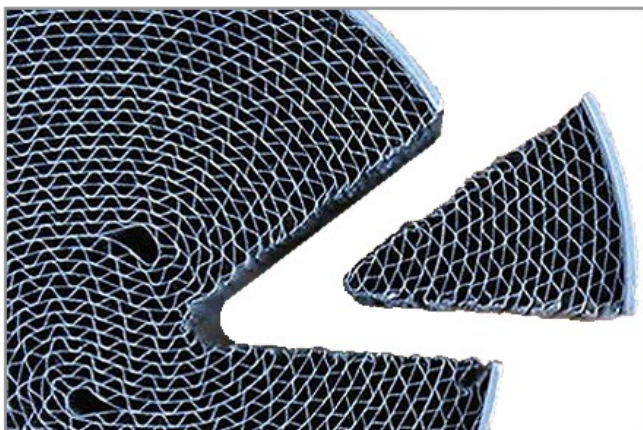

- Warranties for the process, gas purity and life time
- Individual coating of the surface with different precious metals
- Long life cycle
- High efficiency and effectivity

Our solution

- ReiCat offers metal catalysts with a carrier consisting of metal foil, wire cloth or sintered material, coated with different precious metals.

Special features

- Little energy consumption
- Easy handling and maintenance
- Possibility of precious metal recycling
